***Please read this document carefully.*** If our confetti / powder cannons misfire due to negligence, tampering, misuse or abuse, Coloured Smoke Australia will not refund monies paid. Coloured Smoke Australia accepts no responsibility for usage of these supplied products. The end user does so understanding the risks involved.

## to use our hand held cannons:

1. break the top foil seal on the cannon / remove the plastic disc covering the top so that the contents can be launched properly. The foil sealed cannons will still work with the foil intact, but they launch properly with out being encumbered.
2. hold the top half of the tube firmly.
3. ensure the directional arrows are at the top of the cannon and pointed AWAY from ther user.
4. aim as high over the audiences head as possible taking note of the ceiling / space height above. We recommend at least a 1 metre clearance height above your audiences / subjects head.
5. use your preferred hand to twist the bottom section of the cannon in the direction as indicated. Note some recoil may be evident on launch so keep the cannon directly away from the body.

## note:

1. never point at animals, people, objects, into activated flames / fireworks or near powerlines.
2. If in doubt ask permission from vendors, venues, locations etc.
3. while our biodegradable range is water soluble, it can take time for the water to break down the confetti. Some colour running may occur but can be removed with a pressure hose etc. Please keep this in mind when using in places like church steps etc.
4. be aware of people around you when using, including people who are not part of your celebrations. Note these cannons make a loud noise when fired.
5. do not store near a source of heat, including inside hot cars for prolonged periods of time.
6. keep our powder cannons dry and away from moisture and make sure they are properly sealed so the fine powder cannot leak out and make a mess.
7. our powder cannons make a big mess - we suggest testing beforehand and using only outdoors. They shoot out fine coloured powder, and while can be cleaned up with water and soap etc, should be kept away from delicate wardrobe (wedding dresses etc) and environments.
8. consider wind direction and how this will influence the direction of the falling confetti / powder content.
9. do not throw, puncture or incerate the cannon as it contains pressurised gas.
10. do not take on board planes.
11. be careful not to aim at fragile fixtures like chandelliers and hanging installations.
12. this is NOT A TOY and should be handled with responsibility by an adult.
13. please dispose of discharged cannon thoughtfully
14. If the cannon fails to operate after the above please contact us for advice and do not dispose of.
15. cannons are powered by C02 gas and can be transported only via ROAD services.
